Page 5: static page i need same as it is.

03. DOCUMENTS AND INFORMATION RECEIVED BEFORE THE START

The work is based on the information and assumptions available at the time of preparation.

The Contractor reserves the right to adjust the price and/or schedule if, during the execution of the work, unknown conditions or unforeseen events occur that are not included in the existing project materials or specifications.

The prerequisites for the performance of the contract include, but are not limited to:

- Any unforeseen changes along the way are not included.
- Hidden structures, wires or installations that are not placed in accordance with the project materials.
- Changes to the building regulations or other legal requirements that have been adopted after the start date.
- Delays caused by third parties or suppliers beyond the contractor's control.

It should be noted that AB18 (General Conditions for Work and Supplies in Construction) applies to this contract, which means that all parties are obliged to comply with these conditions. This includes dealing with changes, delays, and other circumstances that may arise during the project.

It is expressly noted that the developer and his consultants have full responsibility for ensuring that the project is clearly and unambiguously prepared, so that there is no doubt as to the nature and scope of the work.

Page 10: static page

08. PREPARING FOR PRODUCTION

Process Review

Immediately after acceptance, the company conducts a process review of the project.
In cases with design responsibility, a project review is also conducted.

The purpose of the review is to identify ambiguities and/or risk-prone work performances as well as environmental issues.

In cases where the company has agreements with subcontractors, the company ensures that they carry out a corresponding review.

Page 10: I need a supervision checklist of the project all entries here.

09. PROJECT MANAGEMENT SUPERVISION PLAN

Pos.	What	Where	When	How much	Performed
PROCESS - PROJECT REVIEW					
9.01	Consistency in project materials drawings /descriptions/contract)	Documented in Punkt i Ks-material.	During the process/ Review of the project Before kickoff meeting	100 %	[Select Date]
9.02	Planning of execution methods incl. Risk assessment (working environment) and establishment of QA and WPA folders.	Documented in Punkt i Ks-material.	During the process/ Review of the project Before kickoff meeting	100 %	[Select Date]
9.1 MISCELLANEOUS					
9.11	Photo registration of existing conditions has been made.	Generally.	Before start-up	100 %	[Select Date]
9.12	Submission of QA materials to the Construction Management.	Documented in the QA folder.	Before start-up	100 %	[Select Date]
9.13	Submission of the risk assessment folder to the construction management.	Documented in the QA folder.	Before start-up	100 %	[Select Date]
6914	Submitted finished QA on an ongoing basis to the construction management. At construction meetings or in monthly emails.	Documented in the QA folder.	At construction meetings or via email.	100 %	[Select Date]
9.2 CONTROL FOR THE CONTRACTOR					
9.21	Controlled execution of receipt and process control, including control notes for defects and errors.	Documented in the control chart for executed QA materials.	Continuously, but at least every 14 days and possibly before the construction meeting.	Sampling. - If self-control is insufficient, it will be intensified for weekly self-control checks. so that it can be submitted satisfactorily.	[Select Date]
9.22	Master review/final inspection, including verification that there is quality assurance of the work performed	Documented in the control chart for executed QA materials.	Before closing hidden building parts, before handing over sections/surfaces to another contractor. After the completion of their work.	100 %	[Select Date]
The above is checked by:		NAME			
		SIGNATURE			

10. DESCRIPTION OF THE CONTROL WORK

10.1 CONTROL PLAN (TENDER CONTROL PLAN OR THE COMPANY'S OWN)

The process review in relation to a possible procurement control plan forms the basis for the preparation of the case's control plan, which provides an overall overview of the controls and documentation that apply to the contract.

If no supply control plan has been submitted before the price has been offered, the company's own control plan will form the basis for the company's control.

The control plan is submitted for the customer's approval at a potential project review meeting. If a project review meeting is not held with the construction management, the control plan will subsequently be sent together with the results of the company's process review for the client's approval.

10.2 QUALITY ASSURANCE OF THE PROJECT

The inspection is carried out by the project manager or another person specifically appointed as the inspector for the work and who is familiar with our quality assurance system.

10.3 CHECKING DOCUMENTS

Revised drawings, construction meeting minutes, etc. are sent to the company's e-mail. It is assumed that all revised drawings are accompanied by a revised subscription list and that revisions to the drawings are clearly marked.

Quality assurance documents are presented at construction meetings.

10.4 INFORMATION FOR EMPLOYEES

Before work begins, craftsmen and any apprentices are generally informed about the work at hand and in particular about difficult work processes. In addition, information is provided about the project's quality and environmental requirements.

10.5 IN-DEPTH CONTROL

When materials arrive at the construction site, it is checked that the delivered goods are in the correct quantity and quality according to the inspection plan. Factors of importance to the environment are included in the in-depth management, including the layout of the construction site. The incoming control must be documented.

10.6 PROCESS CONTROL

During the work, the inspections specified in the control plan are carried out. Deviations and their rectification are carried out in accordance with the agreement. Factors of importance to the environment are included in the process control. Process control is documented.

10.7 FINAL INSPECTION

When the work or certain parts of it are completed, the person responsible carries out a final inspection of the work. This final inspection is an internal activity, but evidence of it may be provided.

10.7 DOCUMENTATION

A copy of the documentation of the quality assurance carried out will be sent to the client or its advisers by agreement. All documents, including documentation of the agreed quality assurance, are stored for the current liability period.

11. STANDARD FOR CONTROL PLAN

Pos.	ACTIVITY	ACCEPTANCE CRITERIA	TIME	CIRCUMFERENCE	Method	documentation	Performed
14.??	RECEIVING CONTROL						
14.1?	Delivery notes	Documented under Point in Ks material.	Upon receipt	100 %			
14.2?	Transfer after second/before registration	Documented under Point in Ks material.	When transferring interfaces/spaces or surfaces	100 %			
14.3?	Damages	Documented under Point in Ks material.	Upon receipt of materials or areas.	100 %			
15.1.??	PROCESS CONTROL						
11.1.??	Photo documentation of the existing conditions	Documented under Point in Ks material.	In Execution	25 %			
11.1.??	Submission of QA materials to the Construction Management.	Documented under Point in Ks material.	In Execution	25 %
